

WHAT IS CLAIMED IS.

1. A pack comprising at least one flap with at least one handle wherein the handle is so fitted to one of the faces of the pack that it is arranged eccentrically along an axis of symmetry of the face of the pack parallel to the flap running direction and wherein the handle is positioned to have an angle α between an axis of symmetry of the pack running through the center of gravity and which is perpendicular to the face to which the handle is fitted, and an axis which passes through a support point on the flap formed by a hand contact, as well as the center of gravity and where α is in the range of 10° to 40° .
2. A pack according to claim 1, wherein the angle α is preferably in the range of 10° to 40° .
3. A pack according to claim 2, wherein the angle α is preferably 10° .
